Tran Kim Dat

Full-stack Engineer

Da Nang City / Ho Chi Minh City, Vietnam

(+84) 98 356-4074 - kimdat0705@gmail.com - github.com/dattk2002 - linkedin.com/in/kimdat0705

PROFESSIONAL SUMMARY

Full-stack Engineer with 2+ years of experience delivering production web and cross-platform mobile applications with TypeScript, Python, C#, JavaScript, Dart, and SQL. Built AI learning workflows that use Gemini grounded search, Exa, and Tavily to research sources and generate syllabi and lesson cores, with Langfuse for AI workflow tracing. Experienced in REST APIs, relational data models, authentication, real-time systems, caching, rate limiting, and background processing using FastAPI, NestJS, ASP.NET Core, PostgreSQL, MongoDB, and Redis. Own architecture, automated testing, Docker containerization, GitHub Actions CI/CD, and cloud delivery on Render and Neon.

WORK EXPERIENCE

DAN SOLUTIONS — Oct 2025 - May 2026

Panda POS & Manager — Feb 2026 - May 2026

Multi-tenant POS and F&B management platform for restaurants and food outlets, backed by PostgreSQL and a Strapi headless CMS.

- Implemented 13 API endpoints and 4 React/TypeScript screens-receipt printing, reservation forms, reservation lists, and payments-within a 5-person engineering team, delivering production features for an existing PostgreSQL -backed F&B management platform.
- Built multi-tenant reservation forms with sessions bound to restaurant domains, allowing the same form flow to serve multiple restaurants. Connected booking submissions to backend services and administrative reservation lists. Extended takeaway-ordering, bill-splitting, payment, and kitchen-screen workflows to support day-to-day restaurant operations.
- Contributed tenant-aware permissions and tenant-switching flows alongside a senior engineer in a multi-tenant PostgreSQL architecture using separate databases and schemas, supporting access to authorized restaurant environments.
- Refactored reservation and receipt forms for release, integrated completed changes into the main branch through code review, contributed CI configuration updates, and resolved production bugs reported by restaurant customers in the Czech Republic.

TamdaCMS / TamdaOne — Oct 2025 - Feb 2026

Tamda's websites for Vietnamese community news in Europe, corporate and retail information, B2B wholesale ordering and delivery, and shopping-center listings and leasing.

- Independently carried assigned features from Figma designs through implementation and production delivery using Next.js and TypeScript across public websites and administrative workflows.
- Delivered 10 production features spanning five publishing verticals within a shared multi-brand application foundation.
- Built reusable frontend layouts and CMS integration modules so multiple brands could share implementation patterns while presenting distinct content.
- Integrated 12+ Strapi content schemas through Swagger-documented REST APIs, connecting structured editorial content with public-facing pages.
- Enabled editors to manage routine content changes through CMS workflows without depending on backend releases.
- Collaborated with backend and design contributors to align content structures, API contracts, responsive behavior, and loading, empty, and error states.

Caocao Adventures — Nov 2025 - Jan 2026

Vietnam cycling-tour and bike-rental website where travelers explore routes, review tour details, and access booking and destination content.

- Owned React and TypeScript frontend architecture and delivered three core modules-tour browsing, rentals, and blog content-to production within two months.
- Translated product requirements and interface designs into responsive travel discovery and booking-related workflows.
- Built reusable Ant Design components for forms, layouts, and API-driven content across the application.

- Integrated REST APIs and handled validation, loading, empty, and failure states across booking and content interactions.

Website: caocaoadventures.com

DAN SOLUTIONS — Dec 2023 - Aug 2024

VNCaps — May 2024 - Aug 2024

Mobile school app for Vietnam Canada Preschool, bringing role-based access, timetables, and school notifications into one interface.

- Developed 15+ React Native and Expo screens in TypeScript for student, teacher, and administrator workflows.
- Built reusable mobile components and role-aware navigation to support different school user groups.
- Implemented mobile timetable views and schedule-related interfaces.
- Integrated Expo notifications and backend APIs while maintaining consistent loading and interaction states.

Website: vncaps.edu.vn

Fastcare — Dec 2023 - Mar 2024

Customer website for phone, laptop, and tablet repair, combining service discovery, booking, accessories, and repair-related content.

- Owned Next.js and TypeScript frontend delivery from component implementation and API integration through deployment.
- Implemented 20+ screens for the UI v2 release, including the homepage, blog, and accessory category experiences, using shadcn/ui components.
- Built reusable Ant Design components and standardized API consumption patterns within the relevant application areas.
- Contributed PHP/Laravel administrative features supporting operational and content management workflows.
- Applied shared loading, empty, and error states to make API-driven pages more consistent and maintainable.

Website: fastcare.vn

FPT Capstone — May 2025 – Sep 2025

NgoaiNguNgay — May 2025 - Sep 2025

Capstone language-learning and tutor-booking platform with role-based experiences and one-to-one messaging.

- Built React/Vite and TypeScript interfaces for learner, tutor, staff, and manager workflows across 16 routed pages.
- Delivered tutor booking, offers, cancellations, and status-aware scheduling flows across roles.
- Integrated SignalR one-to-one messaging in the React client, including receipts, editing, deletion, unread state, and automatic reconnection.

SELECTED PROJECTS — May 2026 - Present

Bravodemy — Aug 2026 - Present

AI learning platform that turns personal goals into source-grounded learning paths, 5–10 minute lessons, practice, spaced review, and progress tracking.

- Owned most full-stack implementation across bilingual Next.js 16/React 19 interfaces, FastAPI services, SQLAlchemy/PostgreSQL models, testing, and deployment.
- Built a goal-to-learning workflow with learner approval, Exa and Gemini grounded research, evidence-backed prerequisite-aware syllabi, short lessons, practice, spaced review, and progress tracking.
- Added deterministic validation for generated content and Python/SQL assessments against expected results, including read-only SQL execution on controlled fixtures.
- Developed email/password and Google authentication with refresh-token rotation, plus Polar checkout and signed webhooks for purchases, entitlements, and refunds.
- Used Redis for caching, rate limiting, and locks, with PostgreSQL as persistent state; configured Neon pooled runtime connections and direct migration connections.
- Created responsive light and dark interfaces with TypeScript, Tailwind CSS, and Radix UI, plus Recharts progress views and GSAP motion.
- Containerized the frontend and API for independent Render deployments; added GitHub Actions checks with Pytest, Vitest, and Playwright across browsers and responsive layouts.
- Built reproducible AI evaluations with golden cases, Exa/Tavily comparisons, latency and cost tracking, a Streamlit dashboard, and optional Langfuse traces.

Website: bravodemy.com

Personal Portfolio **Aug 2026 - Aug 2026**

Personal portfolio and bilingual publishing workspace for project case studies and articles, with protected editing, image uploads, and contact workflows.

- Built a responsive Next.js/React/TypeScript portfolio with centralized project records, accessible navigation, generated social images, and reduced-motion-aware interactions.
- Developed bilingual publishing on Neon PostgreSQL and Drizzle ORM, with a Tiptap editor, Vercel Blob uploads, localized articles, scheduled publication, and RSS.
- Secured publishing with Neon Auth, GitHub authentication, and an immutable owner-account allowlist.
- Integrated Resend contact emails with server-side validation, spam protection, header sanitization, and optional Upstash rate limiting.

Website: dattk.dev

TapMood **Jun 2026 - Jul 2026**

Social check-in and messaging app with real-time chat, resumable media uploads, AI-assisted features, and account privacy and moderation controls.

- Built a Flutter/Dart client for six build targets and an ASP.NET Core 10 backend with 117 REST mappings, 38 EF Core entities, and PostgreSQL; containerized the backend with Docker.
- Delivered real-time chat and presence with SignalR, Firebase notifications, and Gemini-assisted features.
- Implemented resumable video uploads up to 250 MB with chunk and SHA-256 validation, pause/resume controls, and interruption recovery.
- Built PostgreSQL media jobs with leases and retries, FFmpeg processing, and Cloudinary delivery.
- Implemented Google sign-in and rotating JWT sessions with replay detection, plus resource-based permissions and group moderation.
- Added blocking, reporting, data export, recoverable account deletion, and scheduled retention processing.

UI: github.com/dattk2002/tap-mood-ui | API: github.com/dattk2002/tap-mood-api

HabiStride **May 2026 - Jun 2026**

Habit tracker that connects daily completion, streaks, and milestones with a growing virtual tree, activity history, and progress analytics.

- Built a Next.js and TypeScript frontend with a NestJS backend for daily habit tracking, streaks, milestones, and tree-based progress visualization.
- Implemented 24 REST handlers across seven controllers and 10 TypeORM entities backed by PostgreSQL, including ownership checks for user-specific records.
- Developed eight App Router pages and 22 UI components covering the dashboard, habits, insights, settings, tree visualization, and authentication.
- Implemented Google OAuth 2.0 and JWT authentication with HttpOnly cookie handling.
- Built completion analytics, streak summaries, and a yearly activity heatmap to help users inspect habit consistency over time.
- Implemented CSV and PDF exports for habit-related data and reports.
- Scheduled daily habit snapshots at midnight in the Asia/Bangkok time zone.
- Containerized frontend and backend services with Docker and deployed them independently on Render with managed PostgreSQL.
